

S - Starting (Have to make the audience imagine)

P - Premise (The Main Idea of the Speech)

A - Actual Reasons (Role and Quality)

C - Call for Action (Examples and Evidences)

E - Ending (The Doughnut Effect)

The doughnut effect

Imagine if that scientist in the lab coat is you and invented the machine to make life easier for people. Will it not be the best thing to do?

My speech:-

Imagine you are a scientist and you are wearing a lab coat inside the lab and trying to solve a big problem for the world. It is tiring for you but simultaneously encouraging you as well. You are trying to create a big change.

Hi, I am Shiv Jain from class 9th and I will be sharing my thoughts on why my ambition is to become a scientist and an innovator; also why is it very challenging but satisfying.

Becoming a scientist has many benefits.

Firstly, you can learn many new things, come up with theories, prove hypotheses, etc.

Furthermore, you can invent stuff to make people's lives easier.

Lastly, it will make you earn praise and you will be able to visit various places.

My family has a history of scientists. They inspire me very much. Also, my grandmother was a biology teacher.

So, the next time when you meet a scientist, think about all the hard work they have put in inventing stuff to make people's lives better.

Imagine if that scientist in the lab coat is you and invented the machine to make life easier for people. Will it not be the best thing to do?

Thank you everybody from the bottom of my heart to listen to my thoughts on why I want to pursue the carrier of becoming a scientist.
